WHAT IS DASH?

Dash (DASH) is a privacy-centric digital currency with instant transactions. It is based on the Bitcoin software, but it has a two tier network that improves it. Dash allows you to remain anonymous while you make transactions, similar to cash.

With Bitcoin, transactions are published to the blockchain and you can prove who made them or to whom, but with Dash the anonymization technology makes it impossible to trace them. This is important because the blockchain is accessible to anyone with an internet connection – a significant drawback for those don't wish their transaction history and balances to be publicly available. Dash does this through a mixing protocol utilizing an innovative decentralized network of servers called Masternodes, avoiding the need for a trusted third party that could compromise the integrity of the system.

Dash transactions are almost instantly confirmed by the Masternodes network. This is a great improvement on Bitcoin's system, where confirmations take much longer because all the work is done by the miners.

DASH Innovative Crypto-currency

What is **DASH**

Dash is an open-source project that delivers safe decentralized financial solutions. The Dash Project Team aims to build and maintain an innovative decentralized payment network which acts as the core of an ecosystem of engaged consumers, merchants, and service providers.

This network provides users with a private, fast, and fungible digital currency to be used in both physical and online transactions.

Dash Team works on a robust ecosystem of modern digital products and services and will cultivate adoption of this ecosystem through education, promotion, partnerships, and engagement of potential users on the benefits of crypto-currencies and Dash.

Because current digital wallets are clumsy and hard to use, people fear doing something wrong or losing their coins. Dash is solving this problem by creating a new system that's as easy to use as cash, credit cards or PayPal.

- Innovative cryptographic currency
- Multi-tiered network
- Properly incentivized infrastructure
- Project governance and funding via decentralized framework
- 60M USD market cap
- More than 10'000 users
